

Durable, Light-Reflectant, High-Performance
Polymer Flooring Systems

Your truck service operation floors are a reflection of your business. You've worked hard to gain the trust of customers by creating a pleasurable sales and service experience. What your facility looks like not only creates an inviting atmosphere, but sets a precedent amongst your competitors and increases employee morale. Protective Industrial Polymers' TruckSpec line of floor coating systems have been specifically developed to provide a safe, long-lasting, durable and aesthetically-pleasing foundation for your fleet sales and service operation.

TruckSpec CT-pro

High-Performance Floor Coating System

This system consists of an epoxy primer, followed by a high-build epoxy basecoat. The system then receives a topcoat of aliphatic urethane. This low-odor coating system can be pigmented in a variety of colors, and features excellent chemical, impact and abrasion resistance. Suited for use in general traffic areas where aesthetics and cleanability are a requirement.

TruckSpec SL-pro

High-Performance Slurry Flooring System

A slurry flooring system consisting of a urethane concrete mortar top coated with an aliphatic urethane. This system features good thermal-shock, chemical and abrasion resistance. Suited for use in areas where the concrete slab is worn or slightly damaged.

Stands up to Heavy Wear and Abuse

TruckSpec floor coating systems have been developed to withstand even the highest degree of wear and tear. From superior impact resistance and compressive strength to aggressive wear and abrasion resistance, our flooring systems can take a beating while continuing to perform for years to come. Dropped tools, heavy engine parts and aggressive traffic are no challenge to TruckSpec flooring systems.

Resists Chemical Attacks and Tire Staining

Our advanced polymer systems will stand up to various automotive fluids, greases and oils, not allowing them to penetrate down into your concrete substrate. For the environmentally-minded, these hazardous waste chemicals will not seep into the surrounding ground through the floors due to the highly protective nature of the coatings. These systems also withstand rubber staining from hot tires.

Professional and Skilled Contractor Network

Protective Industrial Polymers works with a network of recognized installation contractors. These contractors have been properly trained on all of our floor coating technologies. We will work together to ensure all proper preparation procedures and installation methods are properly executed. Additionally, we will work as a team to minimize downtime to ensure quick facility turnaround.

TruckSpec BC-pro

High-Performance Broadcast Flooring System

A broadcast floor system consisting of an epoxy primer, followed by a high-build epoxy broadcast with aggregate media. The system is then coated with a high-build epoxy, and top coated with an aliphatic urethane. This low-odor broadcast system can be pigmented in a variety of colors, and features excellent impact and abrasion resistance. Suited for use in general shop areas where durability, aesthetics and cleanability are a requirement.

TruckSpec MT-pro

High-Performance Mortar Flooring System

A heavy-duty mortar system consisting of an epoxy primer followed by an application of a trowel-applied epoxy mortar. The system is then grout coated with an epoxy grout material and then coated with a high-build epoxy. An aliphatic urethane topcoat completes the system. This mortar system will resurface badly damaged concrete to a new, more durable surface. This system is ideal for heavy-use areas exposed to advanced abuse and forklift traffic.
